

DATA FACILITIES PROVIDES A COST-EFFECTIVE COMMUNICATION METHOD BETWEEN MULTIPLE DATA CENTERS, UTILIZING OUR PROTECTED MPLS POWERED NETWORK.

## Get connectivity between our data centers

Customers housing in more than one Data Facilities location may benefit from high-speed connectivity between the data centers. Create a private connection between our data centers utilizing our MPLS-based Metro Ethernet Network with speeds ranging from 100Mbit to 10.000Mbit.

Our technology is transparent, reliable and redundant. Interconnecting between geographically spread data centers has never been easier. Data Facilities operates a managed Ethernet network that allows fast, secure and reliable communication between your equipment. All of our sites are connected via redundant fiber path, High-availability network configurations for mission critical IT infrastructure are therefore easily configured and maintained to achieve 100% uptime.

## Key benefits of our Intersite connect service

Rack-to-Rack

24h Provisioning

Simplicity

Plug-and-play

Easy to scale

Uptime Guarantee
